

# Marketing Appeals on Brazilian Cigarette Packs

## Fact Sheet

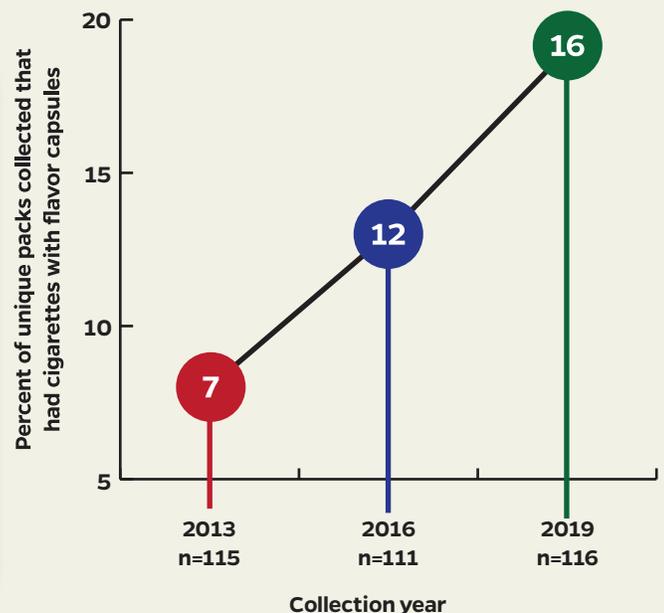

### Background

Brazil continues to build on two decades of strong tobacco control measures and has achieved a marked reduction in smoking rates.<sup>1</sup> Health warning labels occupy 100% of the back, 30% of the front, and 100% of one side of a cigarette package. Despite decreasing brandable space, tobacco companies continue to utilize compelling and appealing marketing on cigarette packaging. A congressional bill<sup>2</sup> to increase health warning labels to 65% of the front and top side and 100% of both sides and inferior side has been approved at the Senate and is being discussed at The Chamber of Deputies.

In September 2019, TPackSS collected 125 unique cigarette packs in São Paulo, Manaus, and Salvador using a systematic protocol.<sup>3</sup> 116 (93%) unique packs collected had the most current warning label; 3 (2%) packs had a prior Brazilian warning label, 4 (3%) packs had no health warning label, and 2 (2%) packs had foreign health warning labels printed on the package.

**Flavored cigarettes, especially with flavor capsules in the filter, remain present in Brazil. Unique flavor capsule cigarettes has increased over time, from 7% of unique packs in 2013 to 16% in 2019.**

Cigarette packs in Brazil have bright, vibrant colors, and elaborate pack design, highlighting the presence of flavor capsules. Many packs use inserts to further communicate flavors and flavor capsules.

Marlboro double fusion insert
